

**ONGOING
PLANNING
PROCESS**

ONGOING PLANNING PROCESS

The planning process does not end with the adoption and approval of this Master Plan Amendment and the adoption of a Sectional Map Amendment. This Plan has made recommendations for new legislation; has made land use recommendations which can be implemented by alternative development techniques; and has proposed policies and guidelines for use in individual project review. However, further actions will be necessary to assure that the goals and recommendations of this Plan are met. This chapter outlines an ongoing planning program which is to be followed after adoption and approval of this Plan. The purposes of this program are: (1) to assure that the Plan and the Sectional Zoning Map remain current with County policies; (2) to assure that development does not outpace the provision of public facilities needed to serve that development; (3) to provide more detailed examination of both small geographic areas and special countywide concerns; and (4) to promote a high standard of design in the development of individual projects.

Plan Amendment/Sectional Map Amendment Cycle

It is essential that Master Plans reflect current County policies and conditions. New policies have developed (such as the Patuxent River Primary Management Area) or new information has become known (such as better analysis of traffic impacts). However, Master Plans have not been revised to reflect this new information in a timely manner. Because Master Plans are the County's official policy guides for physical development decision-making, the lack of an updated Plan can create confusion and possible inconsistency in implementing development policies. Also, one of the purposes of a plan is to set forth a comprehensive perspective. Without this perspective, incremental decisions, having unexpected or unexamined impacts will result.

Therefore, this Plan should be continually reviewed and regularly revised, if necessary. It is the County's policy that the Plans and Sectional Zoning Maps be examined and amended every six years. This allows the Plans to reflect changing policies, conditions, and analyses. Further, this allows the General Plan, the County's overall growth policy document, to remain current, as the Area Plans amend the General Plan.

Adequate Public Facilities and Development Monitoring/Accounting

The amount of development at any given time should be adequately served by the public facilities existing at that time. If this does not occur, local facility users will experience a decline in service. The approvals granted for a number of developments have recognized the need for staging by placing conditions on the approvals.

The staging within this Master Plan relates development requests to their impact on existing and programmed capital improvements. The primary means of insuring a relative balance between growth and adequate public facility capacities is to follow and implement the recommendations of this Master Plan. The County's Adequate Public Facilities Ordinance, administered at the level of development review, is the primary tool by which the County controls this balancing. The Ordinance considers programmed capital improvements together with approved preliminary subdivision plans to analyze the impacts of development requests.

Future efforts to implement this Ordinance should utilize an accounting system based on small uniform geographic areas (such as Policy Analysis Zones). This system would monitor development and its relationship to public facilities' capacities. Also, standards should be developed for all public facilities, not just transportation.

Countywide and Small Area Planning

Area Master Plans are not the only vehicle to address development issues. For instance, the detailed analyses and recommendations for a commercial area revitalization

study may seem too specific within the broader recommendations of an Area Master Plan. On the other hand, analyses for concerns with countywide implications can sometimes best be considered within a countywide framework. Therefore, an ongoing planning program should include both countywide and small area planning.

The Planning Department regularly prepares countywide plans for specific functional elements. These plans sometimes bring specialized expertise towards a countywide problem or concern (such as the Historic Sites and Districts Plan). They may also address subjects which have implications that do not readily fit within Planning Area boundaries (such as the Public Safety Master Plan).

The Planning Department has also initiated a number of small area studies. These can make recommendations on improving an area's physical design or address other problems unique to that small area. These studies include corridor development studies, commercial and neighborhood revitalization plans, and detailed circulation and parking studies. These studies should be used to expand upon Area Plan policies and recommendations. They also develop techniques and policies that can be adapted to other parts of the County. It is anticipated that greater emphasis will be given to small area/neighborhood planning efforts in the future.

These countywide and small area plans are endorsed as a complementary planning mechanism. Area Master Plans should be used to provide background information; to set a policy framework; and to point the need for future studies and amendments. The impact of these plans and studies on the Area Plans is to refine the policies and recommendations; to keep them current in relation to countywide concerns; and to provide a greater level of detail to the land use proposals.

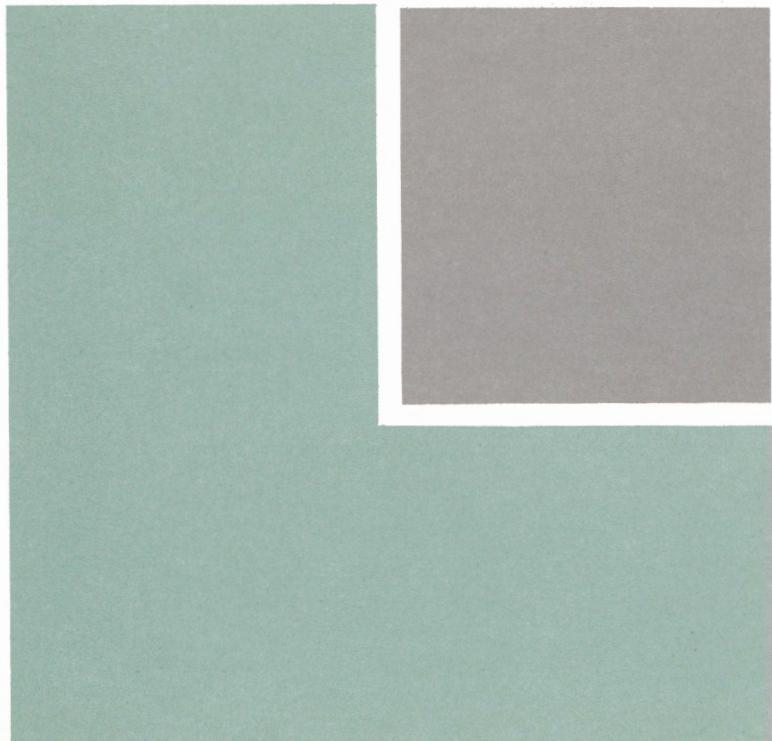

Site Design

Individual site design projects can significantly impact a community's environmental setting and physical character. The choice of materials and design of buildings are important. The relationship of buildings to one another, nearby properties, the natural environment, and the provision of adequate landscaping can also greatly affect the image of an area and its quality of life. The County has become more aware of the importance of these elements of development. It has initiated studies and proposed legislation that will revise landscaping standards. Residential development standards are also being examined.

Throughout this Master Plan, there are guidelines intended to enhance the design of certain types of land uses (i.e., employment and commercial areas, highways, etc.). There are also recommendations and policies intended to guide the design of specific properties (i.e., specific residential densities, provision of buffers along certain roads or around a specific shopping center, etc.). These guidelines and recommendations should be followed during the development review process. Furthermore, future amendments to this Master Plan should consider inclusion of an Urban Design element which sets forth area and property specific design policy guidance for both developing and already developed areas.

**COMPREHENSIVE
REZONING:**

**ADOPTED
SECTIONAL MAP
AMENDMENT**

INTRODUCTION

This chapter represents the Sectional Map Amendment (SMA) for Planning Area 73. The SMA was adopted by the District Council on July 24, 1990 (CR-71-1990). This Comprehensive Sectional Map Amendment (SMA) is intended to implement the land use recommendations of the Master Plan Amendment for the foreseeable future, generally considered to be 6 to 10 years. The Master Plan Amendment and SMA were processed concurrently. The SMA is a formal amendment to the Official Zoning Map.

The procedural sequence provided for in Part 3, Division 4, of the Zoning Ordinance for Sectional Map Amendments is illustrated in the Plan chapter entitled "About This Comprehensive Plan" (see Figure 1). The Planning Board procedures of Section 27-225 of the Zoning Ordinance are incorporated in this procedural sequence.

Comprehensive rezoning is a necessary implementation step in the land use planning process. It attempts to ensure that future development will be in conformance with County land use plans and development policies, reflecting the County's ability to accommodate development in the foreseeable future. Existing zoning which hinders such development will be corrected, and piecemeal rezonings will be minimized by this comprehensive approach.

The adoption of the zoning pattern recommended by the Master Plan Amendment and implemented by the SMA brings zoning into greater conformity with approved County land use goals and policies as they apply to the Largo-Lottsford Planning Area, thereby enhancing the health, safety and general welfare of all Prince George's County citizens. Future comprehensive examinations of the zoning and land use within this area will occur in accordance with the procedures established for sectional map amendments.

The County's Capital Improvement Program and Ten-Year Water and Sewerage Plan, as well as existing land use and zoning, pending zoning applications, and requests and concerns filed as part of the Master Plan and SMA review procedures, were examined and evaluated in the preparation of both the Land Use Plan and the SMA. Consideration has also been given to the environmental and economic impact of the land use and zoning recommendations.

The adoption of this Sectional Map Amendment results in the revision of the official Zoning Map(s) for this Planning Area. The Sectional Map Amendment takes the form of new Zoning Maps at a scale of 1"=200'. The majority of the Planning Area was brought into the Maryland-Washington Regional District on April 28, 1941, and a Comprehensive Zoning Map for this area was adopted on November 29, 1949. The area northwest of Martin Luther King, Jr. Highway was part of the original Regional District (April 26, 1927) with a Comprehensive Zoning Map in 1930. The area south of Central Avenue, east of Western Branch and Northeast Branch was brought into the Regional District on April 28, 1959 (Comprehensive Zoning on July 26, 1960).

The last comprehensive rezoning of the Planning Area took place on June 27, 1978, with adoption of the Largo-Lottsford Sectional Map Amendment by CR-75-1978. The zoning inventory resulting from adoption of CR-75-1978 is shown in Table 4 of the "Existing Situation" Plan chapter; changes to the Zoning Maps subsequent to CR-75-1978 are shown in Table 3 (also in the "Existing Situation" Plan chapter).

COMPREHENSIVE REZONING IMPLEMENTATION POLICIES

A number of established comprehensive rezoning implementation policies are utilized as necessary guidelines for developing the zoning proposal.

Public Land Policy

The established public lands policy states that all public land should be placed in the most restrictive and/or dominant adjacent zone, whichever bears the closest relationship to the intended character of the area. Therefore, the zoning of public land, just as private land, should be compatible with surrounding zones. This policy

should eliminate any "islands" of inharmonious zoning, while still providing for the public use. It should further assure compatibility of any future development or uses if the property is returned to private ownership. A distinction is made where parcels of land are set aside specifically for public open space as part of a large-scale open space network. In these cases, such as regional and stream valley parks, the O-S Zone has been applied, being the most appropriate zone, pursuant to its description in the Zoning Ordinance.

Federal Government property, which is scattered throughout the County, is not subject to the requirements of the Zoning Ordinance. The intent of the comprehensive rezoning process is to apply a zoning category to all land, including federal property, without regard to its unique zoning status. The O-S Zone is generally applied to federal properties, unless specific uses of the property or intended character of the property and/or area should warrant another zoning category.

Limitations of the Use of Zones

Zoning classifications proposed in a sectional map amendment are limited only by the range of zones within the Ordinance at the time of final action by the District Council. However, there are certain restrictions on when these may be applied to properties (Section 27-223 of the Zoning Ordinance).

Reclassification of an existing zone to a less intense zone is prohibited where:

- (1) "The property has been rezoned by Zoning Map Amendment within five (5) years prior to the initiation of the Sectional Map Amendment or during the period between initiation and transmittal to the District Council, and the property owner has not consented in writing to such rezoning;" or
- (2) "Based on existing physical development at the time of adoption of the Sectional Map Amendment, the rezoning would create a nonconforming use. This rezoning may be approved, however, if there is a significant public benefit to be served by the rezoning based on facts peculiar to the subject property and the immediate neighborhood. In recommending the rezoning, the Planning Board shall identify these properties and provide written justification supporting the rezoning at the time of transmittal. The failure of either the Planning Board or property owner to identify these properties, or a failure of the Planning board to provide the written justification, shall not invalidate any Council action in the approval of the Sectional Map Amendment."

Finally, in order to clarify the extent to which a given parcel of land is protected from less intensive rezoning by virtue of physical development, the Zoning Ordinance states in Section 27-223(e) that:

"The area of the property, as the word is used in [Section 27-223(d)(2)] is the minimum required by the Zoning Ordinance which makes the use legally existing when the Sectional Map Amendment is approved."

Guidelines for Commercial Zoning

The SMA applies the most appropriate of the "use-oriented" commercial zones listed in Division 6 of the Prince George's County Zoning Ordinance: C-A, C-O, C-S-C, or C-M Zones. The choice of zone will be determined by the commercial needs of the area, the master plan recommendations, and the type of use and status of the development on the property and surrounding area.

Existing C-1, C-C, C-G, C-H and C-2 Zones were converted to the new "use-oriented" commercial zones in accordance with the commercial rezoning policies endorsed by the Planning Board and the County Council in previously adopted sectional map amendments and in accordance with approved Council Bill 119-1976 which revised the commercial zones. Exceptions will be made where: (1) the old commercial zone has conditions attached to it that should be brought forward in the SMA; and/or (2) because of previous zoning

decisions, development or the existing character of the area, commercial zoning in the new "use oriented" zones is not considered appropriate. In these circumstances, the existing commercial zone (with the zoning application number) will be placed on the new Zoning Map as a specific reference for future development or rezoning actions on the site.

Conditional Zoning

The inclusion of safeguards, requirements, and conditions beyond the normal provisions of the Zoning Ordinance which can be attached to individual zoning map amendments via "Conditional Zoning" cannot be utilized in sectional map amendments. In the piecemeal rezoning process, conditions are used to: 1) protect surrounding properties from potential adverse effects which might accrue from a specific zoning map amendment; and/or 2) to enhance coordinated, harmonious, and systematic development of the Regional District. When approved by the District Council, and accepted by the zoning applicant, "conditions" become part of the County Zoning Map requirements applicable to a specific property and are as binding as any provision of the County Zoning Ordinance (see Conditional Zoning Procedures, Section 27-157(b)).

In theory, zoning actions taken as part of the comprehensive rezoning process should be compatible with other land uses without the use of conditions. However, it is not the intent of a sectional map amendment to repeal the additional requirements determined via "conditional" zoning cases that have been approved prior to the initiation of sectional map amendment procedures. As such, it is appropriate that, when special conditions to development of specific properties have been publicly agreed upon and have become part of the existing Zoning Map applicable to the site, those same conditions shall be brought forward in the sectional map amendment. This is accomplished by continuing the approved zoning with "conditions" and showing the zoning application number on the newly adopted Zoning Map. This would only take place when it is found that the existing zoning is compatible with the intended zoning pattern or when Ordinance limitations preclude a rezoning.

Comprehensive Design Zones

Comprehensive Design Zones may be included in a sectional map amendment. However, the flexible nature of these zones requires a Basic Plan of development to be submitted through the zoning application process (Zoning Map Amendment) in order to evaluate the comprehensive design proposal. It is only through approval of a Basic Plan, which identifies land use types, quantities, and relationships, that a Comprehensive Design Zone can be recognized. Therefore, an application must be filed, including a Basic Plan; and the Planning Board must have considered and made a recommendation on the zoning application in order for the Comprehensive Design Zone to be included within the Sectional Map Amendment (see Section 27-225(b) of the Zoning Ordinance).

Subsequent to the adoption of the Sectional Map Amendment, it is anticipated that Comprehensive Design Zones will be considered on a limited basis as a means to implement specific plan recommendations prior to another comprehensive rezoning. The use of Comprehensive Design Zones is encouraged within the Master Plan for specific properties as an appropriate technique for implementing the Plan.

While not prohibited within the context of Section 27-223, it is the intent of the Zoning Ordinance (Section 27-477(a)) that the Comprehensive Design Zones not be utilized in areas that are recommended for permanent low-density residential development (less than one (1) dwelling unit per gross acre) in Master Plans. This Master Plan has established land use recommendations corresponding to the O-S, R-A and R-E Zones with the stated intent that the land use recommendations be permanent in nature with no provision for staged future development. The "Planning Principles" section of the Living Areas chapter specifically discusses the intended application of Comprehensive Design Zones in the Planning Area.

For more specific reference to Comprehensive Design Zones in relation to Sectional Map Amendment procedures, see Part 3, Division 4, of the Prince George's County Zoning Ordinance.

COMPREHENSIVE REZONING PROPOSAL

To implement the Master Plan's policies and land use recommendations contained in the preceding chapters, many parcels of land must be rezoned to bring the zoning into conformance with the Plan. The comprehensive rezoning process (via the Sectional Map Amendment) provides the most appropriate mechanism for the public sector to achieve this. As such, the Sectional Map Amendment is adopted as an amendment to the official Zoning Map(s) concurrently with Master Plan Amendment approval. There are 44 proposed zoning changes.

The following tables provide an overview of the comprehensive rezoning in support of the Master Plan's land use recommendation. Table 14 contains the zoning inventory totals both prior to and after SMA adoption. Table 15 provides an aggregate inventory of the zoning changes. Table 16 summarizes the type of zoning changes by major policy areas as follows:

1. Administrative Zoning Changes - these changes implement the public lands policies and, in one area, correct a mistake in the boundaries of the two zones.
2. Plan Implementation Changes - these changes implement the specific living area, employment area and commercial area land use recommendations of the Master Plan.

Zone	Zoning Prior to 1990 SMA (6/90)	Net Change	SMA

SUMMARY OF SMA ZONING
CHANGES BY MAJOR POLICY AREA
Planning Area 73

<u>POLICY CATEGORY</u>	<u>TOTAL CHANGES</u>	<u>PERCENT</u>
I. <u>Administrative</u>		
a. Public Lands Conversion	16	36.4
b. Zoning Map Corrections ¹	3	6.8
Subtotal	19	43.2
II. <u>Plan Implementation</u>		
a. Living Areas	17	38.6
b. Employment Areas	4	9.1
c. Commercial Areas	2	4.5
d. Commercial to Residential	2	4.5
Subtotal	25	56.7
TOTALS	44	99.92

¹ Three changes correct mistakes in the zoning map; land developed as single-family detached was shown in the R-T Zone and land developed for townhouses was shown in the R-R Zone.

² Total less than 100 percent due to rounding.

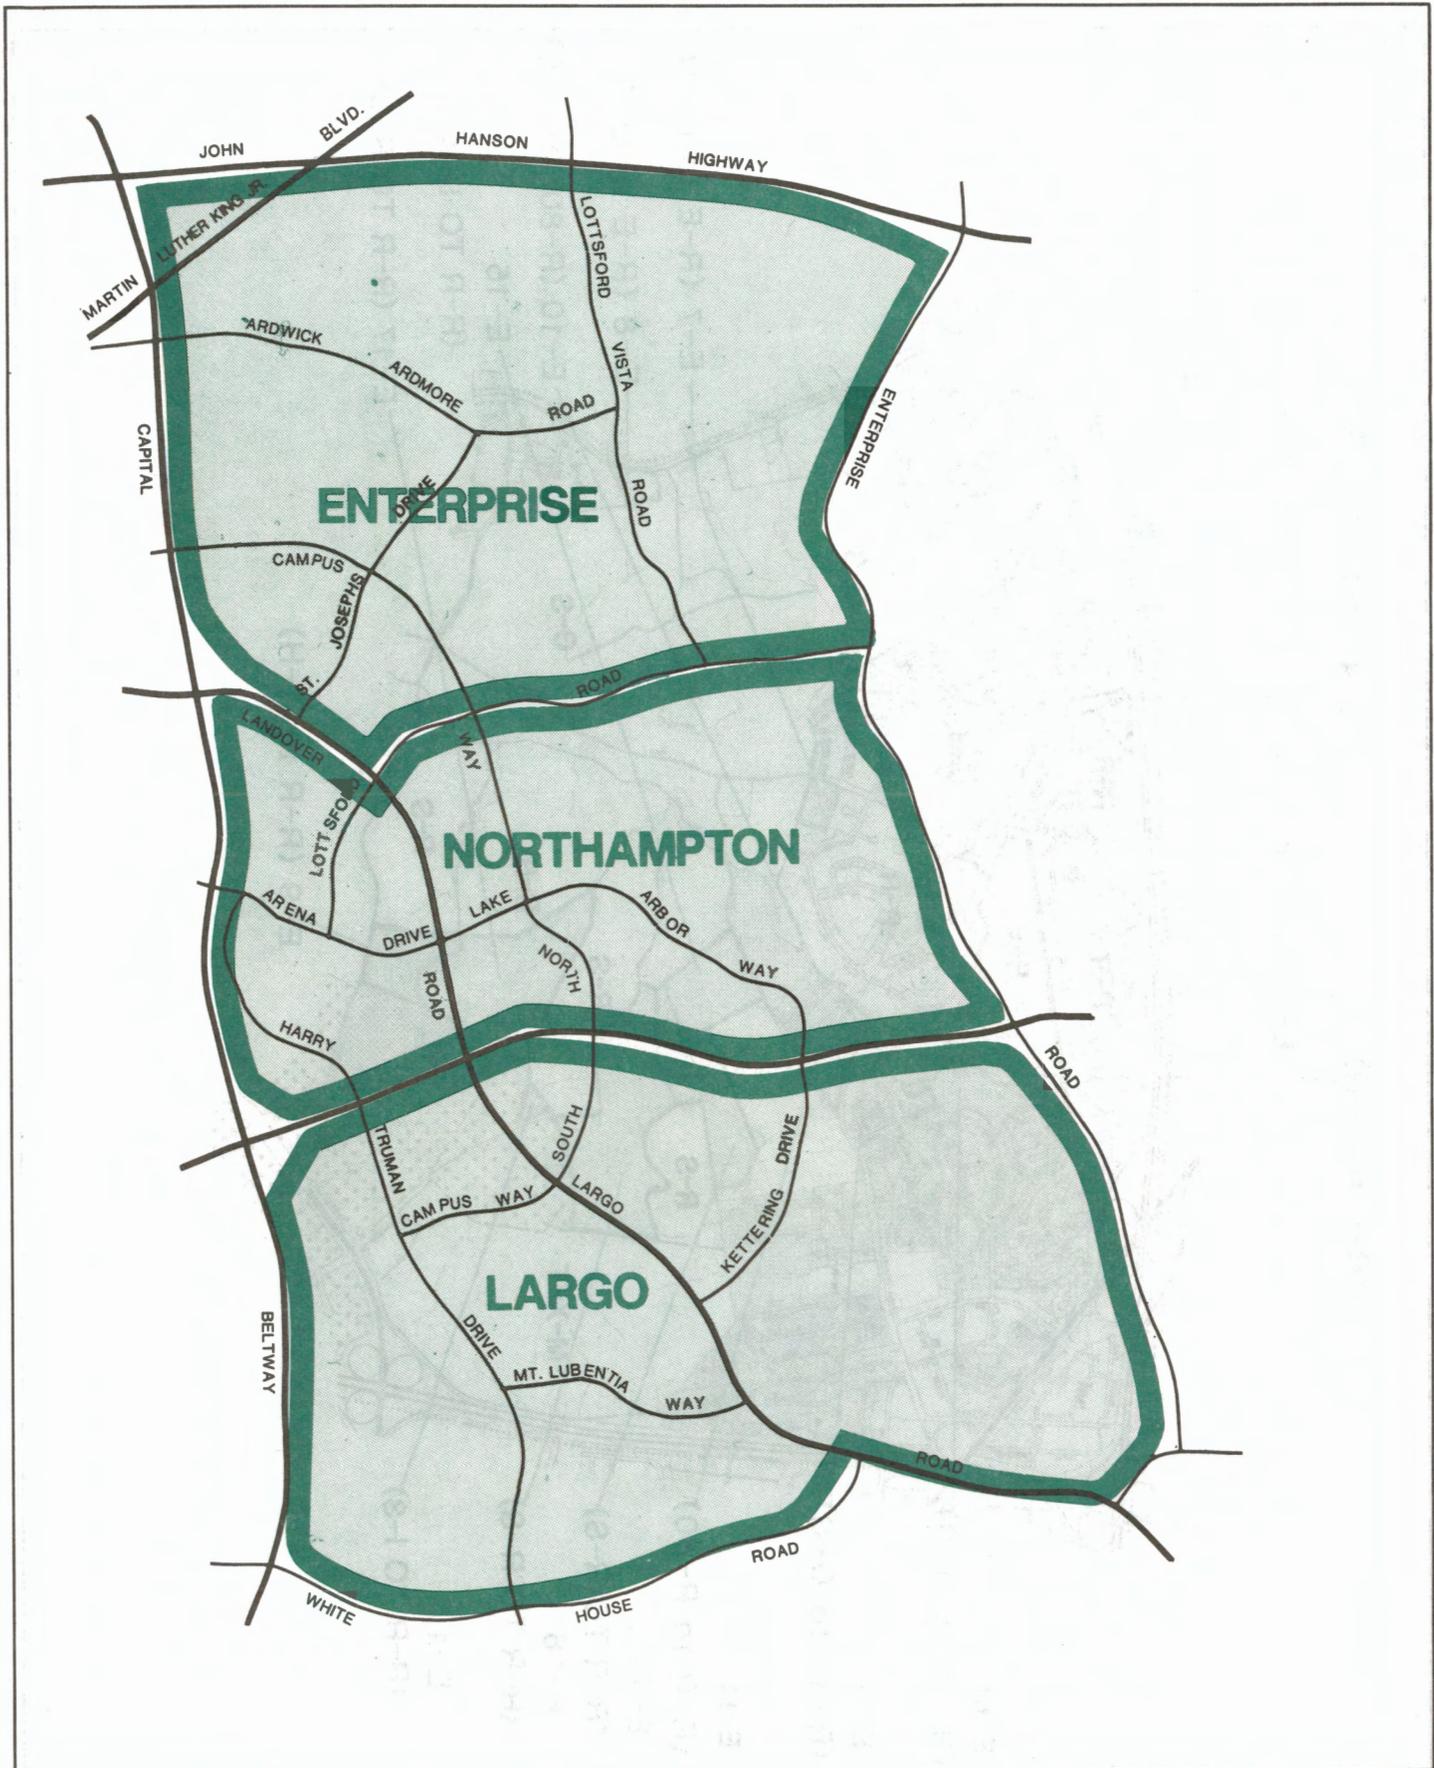

The Comprehensive Rezoning description is organized using the Master Plan's Community Structure (see Map 11). Specific zoning changes are shown on individual Community Maps and described in the accompanying "Zoning Changes" tables (Table 17-19).¹

The "Zoning Changes" tables contain a column entitled "Pending ZAP/CN/R". This column indicates pending Zoning Applications, Considerations (referred to as "Land Use/Zoning Comments and Requests"), and "Requests for Rezoning." These categories are described below.

- Pending zoning applications (at the time of SMA Adoption) are described in Table 20 and shown on Map 15. They are identified in the Zoning Changes tables by their case numbers.
- Considerations, or "Land Use/Zoning Comments and Requests", are submitted by the public at the time of the Public Forum at the beginning of the Plan Amendment process. These are described in Table 21 and shown on Map 16. They are indicated by "CN" in the Zoning Changes tables.
- "Requests for Rezoning" are submitted by the public at the initiation of the Sectional Map Amendment. They are described in Table 22 and also shown on Map 16. They are indicated by "R" on the Zoning Changes tables.

These pending applications, considerations, and requests for rezoning have been reviewed in the context of the Master Plan recommendations. Copies of the considerations and staff recommendations are summarized in this text (Map 15 and Tables 20 and 21). The original submissions are available in the offices of the M-NCPPC, Area Planning Division (East/South Corridors).

¹The "Proposed Zoning Changes" tables property description includes reference to specific subdivision plats. It should be noted that subdivision plat numbers less than 107-14 are the State Department of Assessments and Taxation (SDAT) assigned numbers, not the Land Records subdivision plat numbers. As of 1980, subdivision plat numbers beginning with 107-14 are assigned by the Land Records Office and recognized by SDAT.
